COMMENTS: Combine the concept one storage/  
transportable container, described in the  
Transportable Storage Cask System (TSC Alt) with  
the MPC, Multi-Purpose Canister Alternative.

That is to say, use one overpack for  
both storage and transportation that contains  
a canister (MPC) to contain the fuel assemblies.

This would eliminate one handling of  
the canister shown in the current MPC alter-  
native.

Cost of a single storage/transport

Response to Comment:

- A. The alternative suggested by the commenter is essentially a variation of the Multi-Purpose Canister Alternative. The Navy does not anticipate that requirements or specifications will prohibit using a single overpack design as part of a multi-purpose canister system. If a container vendor designed a single overpack system which meets the requirements of both 10 CFR 71 and 10 CFR 72, handling of the canister could potentially be simplified. A vendor with such a design will have an opportunity to bid when the Navy solicits quotations for container procurement after the Record of Decision.
